This systems seems to use systemd.Please take a look at the provided example service unit files in this directory, and adapt and install them. Sorry!

解决办法：

说明：在centos7下执行会出现这个问题 在查找相关资料后 需要注释utils文件夹下install_server.sh 文件里面的

```
#bail if this system is managed by systemd
#_pid_1_exe="$(readlink -f /proc/1/exe)"
#if [ "${_pid_1_exe##*/}" = systemd ]
#then
#       echo "This systems seems to use systemd."
#       echo "Please take a look at the provided example service unit files in
this directory, and adapt and install them. Sorry!"
#       exit 1
#fi
```

注释掉之后，问题就解决了。
